```
 1 C:\Users\Acer\AppData\Local\Microsoft\WindowsApps\python3.9.exe C:\
   Users\Acer\PycharmProjects\login\src.py
 2 Please Enter number of rows : 3
 3 Please Enter number of columns : 3
 4 Please enter 3 elements for row 1 seperated by spaces : 1 2 3
 5 Please enter 3 elements for row 2 seperated by spaces : 2 3 4
 6 Please enter 3 elements for row 3 seperated by spaces : 3 4 5
 7 Your inputted matrix :
 8 1.0 2.0 3.0
 9 2.0 3.0 4.0
10 3.0 4.0 5.0
11
12 Steps to convert above matrix to row echelon form:
13
14 Step1:
15 R2=R2-(2.0)*R1
16 R3=R3-(3.0)*R1
17
18 1.0 2.0 3.0
19 0.0 -1.0 -2.0
20 0.0 -2.0 -4.0
21
22 Step2:
23 R3=R3-(2.0)*R2
24
25 1.0 2.0 3.0
26 0.0 -1.0 -2.0
27 0.0 0.0 0.0
28
29 Row Echelon form matrix :
30 1.0 2.0 3.0
31 0.0 -1.0 -2.0
32 0.0 0.0 0.0
33
34 Checking if rank(REF(matrix))==order
35 If rank(REF)!=order or if any row in REF is zero, solution is trivial,
   hence det(matrix)=0
36 Singular Matrix
37
38 Process finished with exit code 0
39
